JioCloud

Accurate, Scalable Transcription for Indian Languages — Built for Enterprise Control

JioCloud

Convert audio into structured text with high accuracy, flexible APIs, and full control leveraging JioCloud Transcription Service, designed for Indian language speech.

The Challenge

- Manual transcription is slow, error-prone, and doesn't scale well for growing audio volumes.

- Most global tools fall short on Indian language support — often missing regional accents, mixed-language input, and contextual accuracy.

- Without real-time preview or test environments, integration takes longer and adds uncertainty.

- Teams across legal, healthcare, education, and customer service need transcription that is fast, accurate, and easy to control.

The JioCloud Solution

JioCloud Transcription Service is built to make speech-to-text accurate, fast, and practical - especially for Indian languages.

You can transcribe audio in real time or as a batch, with support for Hindi, Tamil, Telugu, Bengali, and more - including mixed-language input.

Developers can test output in a live playground before going live, while teams get full control through a self-service dashboard and transparent, usage-based pricing.

It's everything you need to make transcription work at scale - without the complexity.

Key Features

- **Multilingual support**
  Accurately transcribes speech in Hindi, Tamil, Telugu, Bengali, Marathi, Kannada, and English - including regional accents and mixed-language input.

- **Real-time and batch transcription**
  Use APIs for live speech transcription or process pre-recorded audio files on demand.

- **Web-based playground**
  Upload files and test transcription output before going live - reducing trial-and-error during development.

- **REST API access**
  Secure, easy-to-use endpoints designed for seamless integration into existing applications and workflows.

- **Self-service managemen**
  Provision, scale, pause, or delete services directly from the dashboard - no manual intervention required.

- **Transparent billing**
  Pay only for what you use, based on audio minutes processed. Set usage limits and track credits in real time.

What You Gain

- Accurate transcription across Indian languages and dialects.

- Reduced time and cost of manual transcription workflows.

- Real-time testing and validation before integration.

- Seamless API integration into apps, backends, IVRs, and platforms.

- Full control over provisioning, scaling, and billing.

- Built-in scalability for education, legal, healthcare, and enterprise use.

Use Cases in Action

Customer support
Convert voice call recordings into searchable transcripts for quality checks, training, and analytics - especially in regional language contexts.

Legal and compliance
Transcribe interviews, court recordings, and audio evidence for documentation and compliance - accurately and securely.

Education and learning
Create transcripts from recorded lectures or webinars to improve accessibility and enable regional content delivery.
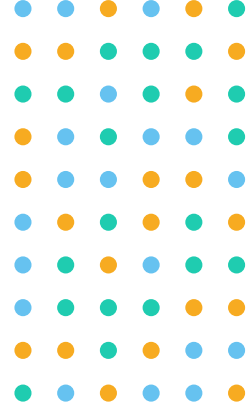

Who It's For:

- *Developers building voice-enabled applications.*
- *Support and operations teams handling multilingual audio.*
- *Legal and compliance teams working with audio documentation.*

- *EdTech and e-learning platforms focused on regional users.*
- *Healthcare providers documenting verbal records in native languages.*

Ideal for

- Developers building voice-enabled applications.

- Support and operations teams handling multilingual audio.

- Legal and compliance teams working with audio documentation.

- EdTech and e-learning platforms focused on regional users.

- Healthcare providers documenting verbal records in native languages.

Why JioCloud

- **Built for Indian languages**
  Our models are trained for Indian languages and accents - not retrofitted from global defaults.

- **Real-time preview**
  Validate transcription output before production rollout using our live playground.

- **Developer-first design**
  REST APIs and sandbox testing make integration fast, simple, and reliable.

- **End-to-end self-service**
  Manage provisioning, scaling, and billing without support delays or ticketing.

- **Flexible, predictable billing**
  Track audio minutes, set thresholds, and control costs with a credit-based system.
