

# Content Summarisation

---

Summarise Smarter – with Multilingual Precision  
and API Control

**Turn long documents into clear summaries – across Indian languages – with real-time testing, flexible APIs, and usage-based billing using JioCloud Content Summarisation.**

## The Challenge

- Enterprises handle vast volumes of unstructured content – documents, call transcripts, support logs, or legal filings – in multiple languages.
- Manual summarisation is slow, expensive, and inconsistent – especially when dealing with Indian languages or domain-specific content.
- Global summarisation tools often lack support for Hindi, Tamil, Bengali, and code-mixed inputs, leading to poor accuracy.
- Businesses need summarisation they can test, trust, and scale – with operational control and developer-ready access.

## The JioCloud Solution

JioCloud Content summarisation converts unstructured content into meaningful summaries – quickly, securely, and with high language accuracy.

It supports both extractive and abstractive methods and is trained to handle Indian languages, bilingual content, and domain-specific aspects. You can summarise healthcare notes, legal case files, support logs, or editorial content – all via simple REST APIs or live testing in the Playground.

Provision in minutes, monitor usage in real time, and pay only for what you summarise – with full control at every step.

## Key Features

- Multilingual support**  
Summarise in Hindi, Tamil, Bengali, Marathi, Kannada, Assamese, Telugu, and English - including code-mixed content.
- Extractive + abstractive models**  
Choose between keyword-based reduction or AI-generated summaries that retain core meaning.
- Live playground for testing**  
Paste sample content and validate summary output instantly across formats and languages.
- API-based integration**  
Connect summarisation with CRMs(Customer Relationship Management), chat tools, knowledge bases, or internal systems using REST APIs.
- Self-service provisioning**  
Start, stop, or scale services via dashboard with no support dependency.
- Usage-based billing**  
Track consumption in real time and pay per character summarised,, with full billing visibility.
- Pay-as-you-go billing**  
No minimums, no lock-in – pay only for what you use.

## What You Gain

- Faster review of long-form content**  
Automatically compress reports, case notes, or customer logs into concise, readable summaries.
- Indian language accuracy**  
Summarise documents in regional languages with better tone, structure, and domain awareness.
- Domain-specific relevance**  
Handles legal, healthcare, and service-sector content without losing context.
- Speed + scale**  
Summarise thousands of documents or conversations daily – without manual effort.
- Flexible developer experience**  
Test live, integrate fast, and control usage - all from a single interface.

## Use Cases in Action

### Legal teams

Summarise bilingual contracts and case files in minutes, preserving legal context and formatting for quick review.

### Customer support

Convert regional-language chat logs into action-ready briefs that speed up ticket resolution and improve agent productivity.

### Media and publishing

Auto-generate summaries for blogs, news articles, or videos in Indian languages to increase user engagement and SEO (Search Engine Optimization) value.

### Healthcare providers

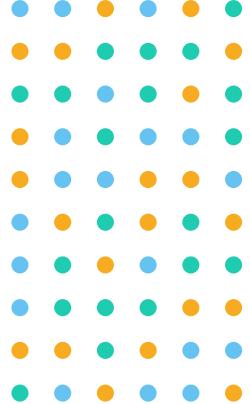

Summarise multilingual consultation notes for doctors and staff, improving clarity and post-consultation workflows.

## Ideal for

- Legal, healthcare, and publishing teams working with regional content.
- Enterprises processing customer conversations in Indian languages.
- Developers and product teams embedding summarisation into workflows.
- Editorial, compliance, and knowledge ops teams automating content review.

## Why JioCloud

- Purpose-built for India**  
Optimized for Indian language tone, structure, and mixed-content formats.
- Live preview before integration**  
Web Playground to test output instantly.
- Flexible API access**  
Developer-friendly endpoints with seamless deployment.
- Self-managed operations**  
Start, stop, scale, or delete without waiting.
- Transparent billing**  
Credit-based usage tracking and alerts for full cost control.
