

# Log Analysis

Troubleshoot Smarter -  
Find and Fix Root Cause 40% Faster

**With JioCloud Log Analytics as a Service (LaaS), cut through cluttered logs, pinpoint issues, and act before they impact your users.**

## The Challenge

- **High volume, low visibility**  
Modern systems generate millions of logs every day. Without a centralised view, it's nearly impossible to spot issues quickly or make sense of the data.
- **Slow troubleshooting hurts everyone**  
Scattered or unstructured logs slow down issue resolutions and delay deployments, hurting your uptime and user experience.
- **Compliance without clarity**  
Meeting audit or regulatory needs is difficult without proper log visibility, retention, and traceability. Fragmented systems create more confusion than clarity.

## The JioCloud Solution

JioCloud Log Analytics as a Service (LaaS) brings together all your logs into one smart, searchable view. From infrastructure and applications to Kubernetes clusters and security tools - everything is in one place, structured and ready for action.

You can collect logs from anywhere, cloud, on-prem, or hybrid environments, and instantly search, filter, or visualise them in real time. Whether you're debugging a failed deployment or tracking suspicious activity, LaaS helps you find the needle without combing the entire haystack.

With built-in log parsing, smart pattern detection, and guided setup, JioCloud LaaS gives you the insights you need - without complex queries or infrastructure headaches.

## Key Features

- **Easy log onboarding**  
Select hosts and log paths, tag by type, and start collecting logs in minutes.
- **Guided parsing configuration**  
Use intuitive UI to set up parsing with regex - or go no-code with smart templates.
- **Real-time search and live log tail**  
Search logs instantly and view live data as it flows - perfect for debugging and incident response.
- **Pattern recognition**  
Automatically group recurring logs and spot anomalies without manually sifting through noise.
- **Severity-based classification**  
Organise logs by severity - ERROR, WARNING, INFO - so teams can prioritise fixes quickly.
- **Detailed event view**  
Drill into specific logs and host-level metrics to get the full story behind any incident.
- **Flexible querying**  
Use filters, keywords, and structured fields to isolate the exact logs you need - fast.

## What You Gain

- **Faster incident response**  
Find the root cause and fix issues up to 40% faster - thanks to structured, searchable logs.
- **Smarter troubleshooting**  
Use live log tailing, filters, and pattern recognition to focus only on what matters.
- **Streamlined log management**  
Onboard logs in minutes, apply parsing rules, and stay audit-ready with traceable records.
- **Cost-efficient observability**  
Optimise retention, storage, and log volume - get insights without overspending.
- **Scales as you grow**  
From a few services to massive distributed systems - LaaS scales with your stack.

## Use Cases in Action

### One platform for all logs

Collect logs from apps, infrastructure, containers, firewalls - all searchable from a single interface.

### Catch issues before they escalate

Get alerts for anomalies or failed logins - and fix the issue before users notice anything.

### Investigate in seconds

Use filters and keywords to jump straight to what went wrong - no manual log combing.

### Stay audit-ready

With complete traceability and long-term storage, compliance is no longer a last-minute challenge.

*Top Industries: LaaS is built for teams handling complex systems, distributed apps, or compliance-heavy environments:*

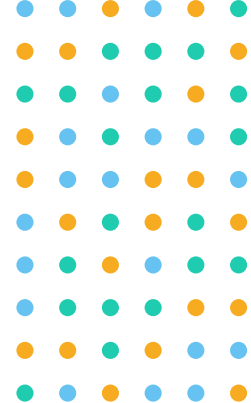

- E-commerce platforms
- Public sector and government systems
- Financial services and digital banking

## Who It's For

- DevOps Engineers
- Platform Architects and Site Reliability Engineers (SREs)
- Security Teams and CISOs
- IT Operations and Infrastructure Managers
- Application Developers
- QA Engineers
- Cloud and Infra Leads

## Why JioCloud

- Built for Scale - Handles logs from a few GBs to petabytes without slowing down.
- Integrated from Day One - Works with your CI/CD, Kubernetes clusters, and security tools.
- Made for Indian Enterprises - CERT-In and MeitY compliant with deployment flexibility for sensitive workloads.
- Backed by JioCloud - Enterprise-grade support, cost-efficiency, and the infrastructure strength of JioCloud.
